Glue or tape

How to Make Your Squishy

You need

- Page 1 printed at 100 % on A4 (120 gsm paper folds best)
- Crayons or coloured pencils (page 2 shows a coloured example)
- Child-safe scissors, and a glue stick or double-sided tape
- Soft stuffing: tissue, cotton wool or foam pieces

Steps

1. **Colour**
   Colour the whole carton first, while the paper is still flat.
2. **Cut**
   Cut along the solid black outline, going around every tab.
3. **Fold**
   Fold every dashed line, including the slanted ones on the roof.
4. **Make a box**
   Glue the long tab inside the far edge, so the four sides stand up as a tube.
5. **Close the bottom**
   Fold the three small tabs in, then glue the square with Bun down over them.
6. **Stuff it**
   Push in the stuffing through the top until the carton feels soft and puffy.
7. **Close the roof**
   Push the two side roof panels in, press the top strips together, then glue.

For the grown-up

Stay close while kids cut. The tabs and the roof fold usually need a helping hand.
Use tissue, cotton or foam. Plastic bags are not safe stuffing for young children.
Seal every edge well so no stuffing can come out.
This is a paper toy, not for the mouth. Check it often and recycle it once it tears.
